

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

It certainly will!!!!!!!

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

Most likely

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

It probably will, just another way make your old tv/vcr obsolete, so you have to spend your money on new compliant equipment.

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

My honest opinion is that it would severely limit the ability to develop new equipment/modes(options??) without purchasing rights for their ("Broadcast Flag") technology.

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

It will drive up the cost of already expensive audio/video equipment, and make the equipment you have worthless so you have no choice but buy their new (OVER PRICED) equipment, thus giving them a monopoly on the audio/video equipment market as well as many others such as computers, and ham radio just to name a few.

Other Comments:

You people are foolish to even entertain the thought of this kind of legislation, you must remember you work for the tax paying people of this country, and we are sick and tired of big industry trying to infringe upon our rights and freedoms.

Your actions will be remembered,
